Seminar W20 - 06

Combatting Terrorism and Violent Extremism

Content:

The threat from terrorist violence is one of the biggest challenges to security policy since the end of WW2 and has grown into an international problem since the turn of the century. Operating on a world scale, Islamist terrorism has dominated discussions of security policy since 9/11. Even though extremists do not seek to achieve their political and social goals with murderous attacks on other people, they often use physical and psychological violence to intimidate and threaten dissenters.

The seminar looks at the concepts of detecting and preventing terrorism and extremism on the local level, on the financing of terror, and the possibility of the reemergence of terror in Northern Ireland and what Radicalisation means within the spectrum of politically motivated violence.

Overall, this is not a seminar on basic knowledge on terrorism and extremism. Allegedly, most of you already have information about these issues. Instead, with this online-seminar, we try to put some spotlights on newest trends, findings in terrorism and extremism and concepts of police to handle challenges and dangers in these matters.

After each session, the participants receive a video recording of the online seminar.

Participation Fee:

IPA Members: 29 €

Non-IPA Members: 59 €

For participation please register here:

https://www.edudip.com/en/webinar/combatting-terrorism-and-violent-extremism/346968

We ask IPA members to provide their IPA membership number and the IPA section they belong to.

For further information regarding the seminar and the terms and conditions, please visit our website: www.ibz-gimborn.de

"Local level police methods for preventing extremism"

Jari TAPONEN, Superintendent, Head of unit for prevention of crimes from Helsinki Police Department, Finland

Requirements

Taking part in an online seminar is quite simple. You have nothing to fear if this will be your first experience of an online seminar. During the Covid-19 lockdown, many of you will have taken part in some form of video chat. Our seminar works in a remarkably similar way. A few minutes before the start of the seminar, please click the link in your registration e-mail. The program will take you through a few simple procedures to test your device and admit you. Please click the prompts as they appear on screen.

There will be lectures of round about 45 minutes, followed by a Q&A and discussion part. You can write your questions and comments in the chat. They will be collected by a moderator and given to the speaker. During the online seminar, only the presenter will be seen in video.

What you need:

- You do not need any additional software to participate in this online seminar. It is a web-based application that does not require installation.

- A good and stable internet connection (optimal would be a minimum 6,000 DSL line and a connection via LAN cable)

- A current browser that supports the ultra-modern technology HTML5 (Web-RTC). Currently, these are the last two versions of Mozilla Firefox, Google Chrome, and Safari.

- Loudspeakers - So that you can follow the spoken word of the speaker.
